

Gearbox Repair

If You Think It's Expensive To Hire a Professional, Wait Until You Hire an Amateur.

Backed by a Hanco Warranty, each gearbox is analyzed and repaired to ensure a quality rebuild. Through ISO-based procedures and work instructions, every repair is governed by our Quality Management System and software, confirming it exceeds the reliability standard set forth by our customers.

Hanco is more than a repair shop, our engineers diagnose root cause failures, make design changes, and eliminate recurring problems. Additionally, internal parts and housings are repaired in our facility, by our own people.

Hanco tests every unit, at operating speed, on a vibration-free, isolated test stand. Units are direct drive, coupled to a VFD motor and tested for temperature, vibration and gear mesh. Vibration is taken using our Commtest VB5 equipment by a trained Vibration Specialist.

Hanco also offers **onsite service**. Call Hanco and ask one of our engineers about having an OSHA/MSHA trained technician come to you.

Our experience encompasses most every brand of gearbox, with no one brand that we specialize in.

Planned Outage, or EMERGENCY BREAKDOWN?

No Problem. Call a Hanco sales engineer for service or email us at Info@Hancoinc.com. We will operate 24/7/365 to accommodate any need.
